

BAKTI SURYA ATMAJA

DEVOPS / CLOUD PLATFORM ENGINEER · FULL-STACK INFRASTRUCTURE

Bandung, West Java, ID | contact@suryatmaja.dev | <https://suryatmaja.dev> | github.com/samsmon | linkedin.com/in/suryatmaja

PROFESSIONAL SUMMARY

Results-driven DevOps and Cloud Platform Engineer specializing in Infrastructure as Code (IaC), container orchestration, and high-availability distributed systems. Proven track record managing 24/7 bare-metal hypervisors (Proxmox VE), multi-AZ AWS production cloud architectures (VPC, ALB, EC2, RDS, S3), automated CI/CD pipelines, and high-concurrency backend services in Go, Svelte 5, and TypeScript. Experienced in edge proxy routing, zero-trust overlay mesh networks (Tailscale/WireGuard), and building telemetry and observability pipelines for distributed services and AI coding agents.

CORE TECHNICAL COMPETENCIES

Cloud & Automation (IaC):	Terraform, AWS (VPC, EC2, ALB, RDS Aurora, S3, IAM, CloudWatch, Route 53), GitHub Actions CI/CD
Virtualization & Systems:	Proxmox VE (KVM / LXC), Linux (Debian, Ubuntu, Alpine), Systemd, Bash Scripting, ZFS Pools, vzdump
Containers & Orchestration:	Docker, Docker Compose, Multi-Arch Container Builds, Docker Engine API, Microservices Isolation
Networking & Security:	WireGuard & Tailscale Mesh VPN, Cloudflare Zero Trust & Tunnels, Nginx Reverse Proxy, Let's Encrypt SSL
Runtimes & Frameworks:	Go (Golang), Python, Svelte 5 / SvelteKit, Bun / Node.js, Laravel / PHP, RESTful APIs, WebSockets
Databases & Caching:	PostgreSQL, Amazon RDS / Aurora, MySQL, Redis (Pub/Sub & Caching), MinIO S3 Object Storage
Observability & AIOps:	Hardware SMART Telemetry, Watchdogs, Rolling Quota & Burn-Rate Analytics for AI Agents

FEATURED ENGINEERING & INFRASTRUCTURE PROJECTS

GDDL — High-Throughput Concurrent Downloader & Daemon

Go · Svelte 5 · WARP · Docker

Flagship Concurrent Download Engine with Anti-Throttle IP Rotation

- Concurrent Architecture:** Engineered a high-concurrency desktop daemon in Go and desktop Web UI in Svelte 5 (Runes) with native qBittorrent and IDM workflow queues.
- High Throughput:** Designed multi-worker download pools featuring adaptive exponential backoff, request jitter pacing, and streaming chunked HTTP data transfers.
- Anti-Throttle Subsystem:** Built automated IP rotation using local WireGuard/WARP SOCKS5 proxy pools to seamlessly bypass ISP/CDN rate limits (HTTP 429) at exact byte offsets.

High-Availability Web Server Architecture on AWS

AWS EC2 · ALB · RDS · S3 · VPC

Fault-Tolerant Multi-AZ Production Infrastructure

- Multi-AZ Availability:** Designed and deployed a dual-instance web tier distributed across multiple Availability Zones behind an Application Load Balancer with round-robin balancing.
- Database Replication:** Configured MySQL binary log asynchronous replication from primary EC2 host to Amazon RDS MySQL replica for automated failover and read scaling.
- Security & Storage:** Implemented least-privilege IAM policies, isolated private database subnets, and streaming media asset storage directly to Amazon S3 buckets.

FEATURED ENGINEERING PROJECTS (CONTINUED)

24/7 Homelab Cluster & Autonomous Private Cloud

Proxmox VE · Docker · Tailscale ·
vzdump

Self-Hosted Bare-Metal Virtualization & Compute Fleet

- **Infrastructure Cluster:** Engineered a bare-metal Type-1 Proxmox VE hypervisor running 35+ containerized microservices across isolated LXC and Docker host tiers.
- **Mesh Networking:** Enforced zero-trust ingress using Cloudflare Tunnels (cloudflared) and encrypted WireGuard/Tailscale mesh, eliminating exposed public port forwards.
- **Resilience & Backups:** Configured automated nightly vzdump snapshots, multi-terabyte DAS storage pools, and hardware SMART health canary watchdogs.

Yado Network & SSO Centralized Identity Provider

SvelteKit · OAuth2 · PKCE ·
PostgreSQL

Enterprise-Grade Authentication Gateway & Service Launcher

- **Zero-Trust Identity:** Implemented standard OAuth2 Authorization Code flow with PKCE (S256) to secure all private homelab web applications with single sign-on.
- **Service Telemetry:** Built an active uptime telemetry engine tracking 90-day incident histories and container status via live health probes.

Malas Library & Pore.js Core Engine

SvelteKit · PostgreSQL · Canvas ·
Webtoon

High-Performance Media Catalogue & Zero-Backend Reader Engine

- **Media Platform:** Developed a full-featured personal manga and novel catalogue managing 100+ titles with PostgreSQL JSONB indexing and collection tracking.
- **Client-Side Engine:** Built Pore.js from scratch: a zero-backend browser reading engine with canvas-based pagination, supporting EPUB, PDF, and CBZ/ZIP formats.

CERTIFICATIONS & PRACTICAL LABS

AWS re/Start Program Graduate

AWS Cloud & Operations

Hands-On Cloud Architecture & Systems Operations Specialization

- Completed intensive practical training in enterprise cloud computing, Linux system administration, and infrastructure automation.
- Architected multi-tier VPC topologies with public/private subnet routing, NAT gateways, and automated Elastic Load Balancing (ALB).
- Configured Auto Scaling Groups with step scaling policies and lifecycle hooks for zero-downtime traffic spikes.
- Conducted configuration management and remote fleet execution using AWS Systems Manager (SSM) and Session Manager.

EDUCATION & ACADEMIC BACKGROUND

Bachelor of Science / Diploma in Computer Science / Information Technology

Indonesia

Specialization in Cloud Computing, Network Engineering & Distributed Systems

- Core Coursework: Operating Systems, Computer Networks, Distributed Systems, Database Management Systems, Object-Oriented Software Engineering.
- Hands-on laboratory research focusing on containerized virtualization, high-availability architecture, and automated cloud workflows.

AIOps & TECHNICAL HIGHLIGHTS

- **High Availability:** Maintains 99.9% target uptime across 15+ self-hosted production homelab services with proactive alerting and automated self-healing.
- **AIOps Observability:** Implemented AI coding agent usage telemetry: tracks turns/day, 5-hour rolling quotas, and 7-day token burn-rate analytics on bare-metal.
- **Open Source:** Active open-source contributor with 10+ public engineering repositories spanning Go, SvelteKit, and cloud automation.
